Timothy Leary, M.D., *First Resident Assistant Pathologist*.
Richard M. Pearce, M.D., *Second Resident Asst. Pathologist*.

Miss Emma T. Eliott, *Assistant Superintendent of Nurses*.
Miss Alma C. Hogle, *Second Asst. Superintendent of Nurses*.
Miss Elizabeth C. Fairbank, *Night Superintendent of Nurses*.
Miss Sarah P. Boyden, *Housekeeper*.

SOUTH DEPARTMENT.

J. H. McCollom, M.D., *Resident Physician*.
Frederick W. Pearl, M.D., *First Assistant Physician*.
Frank L. Morse, M.D., *Second Assistant Physician*.
Miss Mary M. Riddle, *Assistant Superintendent of Nurses and Matron*.

House Officers (Senior).

Frederick J. Russell.
Fitz Albert Oakes.

House Officers (Junior).

Patrick F. Kelleher.
William P. Grovestein.

CONVALESCENT HOME.

Miss H. Josephine Shepherd, *Matron*.

REPORT OF THE TRUSTEES.

THE BOSTON CITY HOSPITAL,
BOSTON, January 31, 1897.

HON. JOSIAH QUINCY,

Mayor of the City of Boston:

The Trustees of The Boston City Hospital, in compliance with the Ordinances, respectfully present herewith their annual report *for the year beginning February 1, 1896, to January 31, 1897, inclusive.*

NUMBER OF PATIENTS AND EXPENDITURES.

Number of patients remaining in the hospital		
January 31, 1896.	:	452
Admitted from February 1, 1896 to January		
31, 1897, inclusive :		
Medical	3,663	
Surgical	3,560	
Gynæcological	515	
Ophthalmic	103	
Aural	100	
	—	7,941
Treated during the year	8,393	
Discharged during the year	7,092	
Died " "	835	
	—	7,927
Number of patients remaining in the hospital		
January 31, 1897		466

Largest number of patients in the hospital at any one time	500
Smallest number of patients in the hospital at any one time	431
Daily average number of patients	463 $\frac{43}{100}$
Average number of days' stay of patients	20 $\frac{20}{100}$
Number of patients accidentally injured, admitted,	1,991
Number of weeks' treatment given in hospital	24,231
Number of days' treatment given in hospital	169,619
Number of applicants for admission to hospital	11,396
Number of applicants rejected	3,455
Number of patients treated in Convalescent Home,	453
Number of patients treated in the out-patient departments, classified according to diseases:	
For medical diseases	3,455
“ surgical “	9,080
“ diseases of the eye	1,588
“ “ “ “ ear	665
“ “ “ “ skin	1,117
“ “ “ women	767
“ “ “ the nervous system	599
“ “ “ the throat	1,146
Surgical out-patients treated in the accident-rooms, and not elsewhere included	2,145
Total number of out-patients	20,562
Number of visits by patients to the out-patient departments, classified according to diseases:	
For medical diseases	6,247
“ surgical “	45,368
“ diseases of the eye	5,158
“ “ “ “ ear	3,908
“ “ “ “ skin	2,319
“ “ “ women	2,858
“ “ “ the nervous system	3,670
“ “ “ “ throat	3,767
Surgical out-patients treated at accident-room, and not elsewhere included	2,145
Total number of visits of out-patients	75,440

STATISTICS OF PATIENTS ACCORDING TO SERVICES, FEBRUARY 1, 1896,
TO JANUARY 31, 1897, INCLUSIVE.

Services.	In Hospital Feb. 1, 1896.	Admitted.	Discharged.	Died.	Total Dis- charged and Died.	In Hospital Feb. 1, 1897.
First Surgical.....	55	1,187	1,067	92	1,159	83
Second Surgical ...	63	1,117	999	98	1,097	83

First Medical.....	70	1,121	981	151	1,132	59
Second Medical....	70	1,213	1,053	171	1,224	59
Third Medical.....	68	1,329	1,120	220	1,340	57
Gynæcological	35	515	494	22	516	34
Ophthalmic	2	103	98	98	7
Aural.....	4	100	87	6	93	11
Totals	452	7,941	7,092	835	7,927	466

The entire amount expended for all departments of the hospital during the year was \$341,331.14. Of this amount, \$243,906.15 was on account of the hospital proper; \$71,286.24 on account of the South Department; \$8,417.32 on account of the eight out-patient departments; \$7,668.47 for the Convalescent Home; \$1,825.28 on account of determining the settlement of paying patients; \$2,517.48 on account of new buildings, and \$5,710.20 on account of Pathological Building.

From the amount expended for the hospital proper (\$243,906.15) should be deducted the difference in the amount of stock on hand February 1, 1897, which was \$1,394.39 more than we possessed on February 1, 1896; making the total amount chargeable to the expenditures of the year \$242,511.76. Of the total amount expended, several items were for purposes not within the ordinary yearly maintenance of the patients. From the itemized table of disbursements it will be seen that there were expended for expense incurred in card cataloguing clinical records, etc., \$732.99; medical and surgical reports, \$480.53; making a total of \$1,213.52, which, deducted from the total expenditures of the hospital proper, leaves \$241,298.24

properly chargeable to current expenses. This amount, divided among 8,393 patients, for 24,231 weeks' board, gives \$9.95 as the cost to the city of each patient per week. The weekly cost of each patient at the Convalescent Home has been \$6.01. The Trustees have collected and paid into the City Treasury in cash the sum of \$47,776.71, this sum having been received principally on account of board of patients. No allowance has been made for this amount in computing the weekly net cost of each patient to the city.

The maximum number of patients in the hospital proper at any one time was 500, or thirty-three less than last year. The minimum number at any one time was 431. The daily average number of patients was $463\frac{43}{100}$, or fifteen more than last year. The total number of patients treated in the wards was 8,393, which was forty-six less than last year, and 206 less than two years ago.

The report of the Superintendent presented herewith, contains, besides other information, a more detailed statement of the expenditures of the year, and of the number of patients admitted, and is accompanied by the medical and surgical statistics. These tables give in detail the number of patients treated in the hospital, and the number treated in the out-patient departments during the year, with classified statements of their diseases and results of treatment.

PAYING PATIENTS.

During the year there has been collected on account of the board of paying patients of all classes the following amounts: From the Commonwealth of Massachusetts, for the board of patients for whom the State is responsible, \$19,435.93; from various cities and towns, \$7,572.56; from private room and ward paying patients, collected at the Superintendent's office, \$17,070.04; and for the board of paying patients at the South Department, \$2,212.51, making the total income from all classes of paying patients, \$46,291.04. There is still due the hospital from the Commonwealth about \$26,000 on account of the support of State charges, which will not be received until the next

hospital year, the State appropriation for this purpose having been exhausted.

There has been a change in the accommodations for paying patients in private rooms, for various reasons. Owing to the reconstruction of the operating amphitheatre and the surgical building, Ward N, for private surgical patients, and Ward O, for paying women patients, were temporarily abandoned. The opening of the new Wards, W and X, gives five additional private rooms for surgical patients, and the isolating rooms in Wards A and E may be used for private room paying patients, until the surgical building is completed. The demand for private rooms, particularly for surgical patients, has been much larger than the hospital has been able to supply. The existing accommodations have been given chiefly to those who are residents of the city of Boston. When Wards N and O are reconstructed and ready for occupancy, the accommodations will probably be all that the hospital ought to set aside for this class of patients.

PRESENT CAPACITY OF THE HOSPITAL.

The number of beds in the hospital proper at the close of last year was 482, and at present is 512. Two additional wards have been opened, and Wards A and E have been transferred to services not originally intended, thereby somewhat changing the character of the occupancy, and increasing the bed capacity of the hospital. Wards N and O are temporarily closed during repairs of the surgical ward building, therefore the total capacity at the present time remains practically the same as last year. With a possible bed capacity of 512 beds in the hospital proper and 240 at the South Department, the total capacity at the present time is 760 beds, which will be still further increased to 800 on the completion of Wards M, N and O.

NEW SURGICAL BUILDING AND WARDS.

Much progress has been made, during last year, towards completing the hospital enlargement begun by the Trustees during the previous year. The surgical operating building,

whose reconstruction was begun last year, is only partially completed. It was necessary, in order that the functions of the hospital might not be interrupted, that this building should be constructed in two sections. During the last year the first part was finished and the old portion is now in the hands of the contractors for reconstruction. The new portion of the surgical operating building recently occupied is now used for the following purposes: The lower story, which is practically above grade, is used for accident rooms, the treatment of out-patients, and casualty wards for the first admission of patients suffering from surgical injuries, and rooms for kindred purposes. The second story is for special operating rooms and purposes incident thereto. The third and fourth stories of this building affords private apartments for house-officers.

It is intended, when this building is entirely finished, to publish a complete detailed account of this and all the other new buildings built during the last four years, and therefore only a brief description is here given. There will be at all times four rooms, each properly equipped and practically a duplicate of the others, for the treatment of all accidents and out-patients at any time of day or night. There are suitable waiting rooms in connection with these for the friends of patients and visitors, an office for the general conduct of the surgical department, together with rooms for the preparation of surgical dressings and bandages, and storerooms. There are also two casualty wards, with a duty or service room between them, the larger one having eight beds, intended for men, and the smaller one five beds, intended for women. Although the building has only been occupied about three months, it greatly facilitates the reception and prompt care of new cases, whether for admission to the hospital or for temporary care as out-patients. The casualty wards receive all accidents, large or small, except burns, that may come during the twenty-four hours, and each morning suitable cases are transferred to other wards according to the case. This first aid to the cases gives better opportunity for observation, and helps to better classification. It also gives opportunity for patients who are seriously injured and can live

only a few hours, to receive proper treatment under the most favorable conditions, without sending them to the wards, thereby subjecting other patients to the depressing effect of proximity to the dying. The wards are thoroughly and excellently equipped, and they have a nursing force both by day and by night.

The operating rooms, on the first or main story, are five in number, only four of which, however, are used at the present time. The sterilizing room has been properly equipped, and probably has the most extensive appointments for sterilization and preparation of surgical dressings of any hospital in the country. The instrument room, room for preparation of dressings, etherizing room, and Surgeons' and House-officers' Consulting Rooms, make the new part almost a complete building in itself. The accommodation for large numbers of students to witness clinics and operations must wait the completion of the new amphitheatre. The largest operating room, however, has been furnished with temporary seats, and about sixty can be comfortably seated for witnessing surgical operations. The second and third stories are entered by a special stairway, and the rooms are so arranged that each house-officer can have a private sleeping room, most comfortably furnished, with access to a large sitting room for social purposes.

The new surgical ward building of two stories was occupied in October last. Ward W, for surgical men, has twenty-nine beds; and Ward X, in the second story, for surgical women, has thirty beds. Of these, five are for paying patients in private rooms, and fifty-four for ward patients. The general plan of these wards is radically different from any others in the hospital. They are so arranged that the service and various other rooms are upon the north end of the building, leaving the open ward free from obstruction, with sunlight from the east, south and west during the entire day. From the hospital point of view, they are the best constructed, and furnish the best ward accommodations of any building in the entire group. A description of this building will be included with the others to appear later in the year. Practically the first and second

stories are the same. Besides the wards and private rooms, there are also service or duty rooms, head nurse's office, clothes-room, linen-room, with baths, lavatories, and the usual ward accommodations. The water-closets are placed in a tower with cross ventilation between the ward building and the water-closet tower upon the north corner of the building. These have been arranged so as not to affect the light in the ward, and for obvious hygienic reasons are separated from the building itself. The interior of this tower is constructed of glazed brick, having tarazzo floor and marble baseboard, like the bath and lavatory.

ELECTRIC PLANT.

During the year a special sum of \$40,000 was appropriated for the installation of an electric light plant. Under Your Honor's directions, the Electrical Construction Division of the Public Buildings Department has been wiring the old buildings and arranging contracts for engines, dynamos and other proper connections. Considerable work remains yet to be done, but at present nearly all the old buildings have been wired, the engines and dynamos are practically installed, and it is expected that by the first of June of the coming year everything will be in readiness to give electric light to the entire hospital buildings.

It is problematical whether the present power-house will afford the necessary amount of steam to heat the entire group of buildings and furnish power for the electric light and engines that are installed for additional heating and ventilation. The Trustees believe that it is for the interest of the city to enlarge the present boiler house, as undoubtedly it is not adequate for the work it will ultimately be called upon to perform.

REFRIGERATING PLANT.

During the year there has been constructed in the basement of the pathological building a refrigerating plant, put in by Westinghouse, Church, Kerr & Co., according to the plans submitted by that firm, at an expense of \$6,797.96. The method is that known as the "ammonia process." In

the mortuary and morgue there have been constructed twenty columbarii or receptacles for dead bodies. This arrangement permits placing the dead bodies in air chilled by the refrigerating process, so they can be kept for an indefinite time at a temperature of 24 to 30 degrees F. above zero even during the summer months. This system has been of the greatest convenience, and has been appreciated not only by hospital workers but by the friends of patients. This method and general plan for keeping dead bodies has been inspected by undertakers, architects and others, who pronounce it the best possible for hospital use.

The refrigerating plant was constructed of sufficient capacity that the ammonia is carried by means of underground pipes to the refrigerating rooms of the hospital kitchen, and has been found to work admirably, and has led to a large saving of ice. The Trustees are not able to offer comparative figures, because the plant has only been in operation a part of the year, but next year they can give the comparative cost of the two methods.

IMPROVEMENTS UPON THE HOSPITAL GROUNDS.

The Trustees were fortunate in securing a special appropriation for general improvements of the grounds by construction of brick walls which have been needed for a long time. That portion of the grounds on the East Springfield street lot, which for many years has been a common dumping ground for the neighborhood, has been improved under the supervision of the City Engineer's Department. The grounds about the Pathological building, Nurses' Home, and the space between (nearly two acres) have been filled to the proper grade with earth from the excavation of the new buildings. The proper thickness of loam has been placed over the whole, and the grounds seeded. New roadways have been constructed to meet the new conditions, and a considerable portion of artificial checked-stone driveway has been placed between Wards E and K and the Pathological Building, thus affording a common sidewalk and driveway for this portion of the grounds. There have been built 1,150

feet of brick wall, eight feet high, laid as "Flemish bond," surmounted by a marble coping, to correspond with the walls around the South Department. This extends from the unfinished wall on East Concord street the entire length of the hospital grounds on Albany street and on Massachusetts avenue, nearly to the corner of Harrison avenue. This gives the hospital grounds a degree of protection, never possible before, and its effect upon the good discipline of the hospital is already felt. This improvement is a large and a permanent one, befitting the size and dignity of the hospital buildings and surroundings, and affords the long-desired and proper airing grounds for patients.

HOSPITAL RENOVATIONS.

There have been expended during the year in all the departments of the hospital the sum of \$16,839.15 for repairs and renewals upon the buildings, including roads and sewers. The details of this expenditure are more fully pointed out in the report submitted by the Superintendent. The principal items of expenditure have been the construction of iron balconies on the north end of Wards B and F, the reconstruction of all the food elevators in the hospital, extensive additions in plumbing to Wards R, S, K and L, as well as smaller improvements in Wards P and T.

The Trustees are rarely able to accomplish in any year the amount of repairs that the condition of the buildings demands, as the estimates for appropriation made each year by the Trustees are cut down. Work that should be done is constantly compromised, and too much patching and temporary expedients are resorted to, for want of means to make repairs as often and as fully as the good care of the buildings demands.

MEANS FOR EXTINGUISHING FIRE.

During the year, the Trustees received an appropriation of \$4,500, in accordance with their previous recommendations, for the purpose of establishing a system of hydrants and water stand-pipes for extinguishing fire. On the request of the Trustees, the City Engineer's Department furnished

plans and specifications for this purpose, and there are now upon the premises 101 stand-pipes with sufficient hose to reach every room in the entire group of hospital buildings. There are also nine hydrants conveniently placed for the use of the Fire Department when needed. Additional extinguishers have been placed in several of the buildings, so that the premises are well provided with means for extinguishing incipient fires.

NEW LAUNDRY BUILDING.

The Trustees gratefully acknowledge the continued generosity of the City Council in adopting their recommendation made in the last annual report for means with which to construct a new laundry building. The City Council has appropriated \$36,000 for this purpose, and the Trustees have formulated the plans for the building. The new building will contain two separate, complete laundries, one for the hospital wards, and another for officers and employees. These rooms will be furnished with all modern conveniences and methods of handling the work with the greatest despatch and efficiency. It is intended that the machinery and outfit shall be of the latest and most approved pattern, as the new methods adopted in the treatment of patients, especially in aseptic surgery, has largely increased the demands upon this department of the hospital industry. The washrooms will be constructed of non-absorbent material, glazed brick walls, with tiled flooring, special receiving rooms and delivery rooms to facilitate the assorting and classification of the goods. There will be a plentiful supply of fresh air and good ventilation to eliminate, as far as possible, the noxious air always present in laundries.

HOSPITAL NECESSITIES.

The Trustees are grateful for the generous support that has been given to the hospital, but they deem it their duty not only to present this official report of the principal transactions of the year, but also the necessities that should be provided. The hospital has in recent years made marked progress in enlarging its capacity for more properly

doing the work, but until the recent enlargements are fully completed to work out its full usefulness the Trustees must not cease their efforts to see that the buildings are fully equipped.

Many of the buildings are thirty-three years old, and, under various influences of wear and tear, they require constant care to keep them in order and in proper condition for hospital work. This necessitates renewals, renovations, and extensions.

The hospital kitchen, which was constructed eighteen years ago, is practically required to do two and a half times as much work as when built. The floor has sunken, and is of composite construction of brick and slate. The roof is low, and in the summer season the temperature is often excessive. This roof should be raised to give more light and purer air, with contrivances to keep the smell of cooked food from permeating other parts of the household, new floors put in, and other minor improvements.

The Trustees have recently reorganized the Gynæcological Service by converting a male medical ward into a women's ward in the Gynæcological Service. The operating rooms were constructed eighteen years ago, and cannot properly perform the work for want of requisite space and the conveniences that modern surgery demands. The Trustees have already communicated to your Honor that, in their opinion, the sum of \$9,800 is needed to make the alterations and improvements necessary in that service.

The new laundry building, for which the Trustees already have an appropriation, requires additional means over and above the appropriation, to furnish the necessary apparatus for heating the building, as well as fetching steam power to the engines. The principal heating main, conveying the steam from the present power-house to the hospital, runs through the old laundry building, and when the new laundry building is erected, these steam mains must be diverted, and go around and outside the building in trenches. This will cost about \$800.

The new surgical amphitheatre, now in process of reconstruction, will require sundry new constructions arising

from unforeseen complications always happening in the reconstruction of an old building. There will be required additional fans for heating and ventilating apparatus, changing location of steam mains, running additional ducts, making certain changes in the underpinning, and doing away with the present wooden corridor, making it to conform to the new iron and glass corridor, all of which will require the sum of about \$8,300.

PATHOLOGICAL LABORATORY.

A brief description of the pathological group of buildings was given in the last annual report. It has been found by experience that the buildings meet all requirements necessary for the work of the Pathological Laboratory. A very large amount of work has been accomplished, the professional work of the South Department making great demands upon this important department. For many weeks there was an average of 100 to 125 culture tubes to be examined daily, and the work necessary for the South Department has greatly restricted the work originally planned for the Pathological Department. The work has been under the supervision of Dr. Councilman, the Visiting Pathologist, aided by two Assistant Pathologists, a salaried First Resident Assistant Pathologist, a salaried Second Resident Assistant Pathologist, an Assistant in Clinical Pathology, two Pathological House Officers, and a stenographer and typewriter. An account of the professional work of this department will appear in the forthcoming volume of the Medical and Surgical Reports.

The Mortuary Chapel has been found very useful in affording the friends and relatives of deceased patients opportunities for holding burial services without the expense of a church, or the inconvenience and cost of a funeral at home.

OUT-PATIENT DEPARTMENTS.

The various out-patient departments have continued their usual work during the year, and there has been no special change, except an increase in the amount of work done by these departments. The number of visits of out-patients

have been 75,440, as against 65,796 during the previous year. While all the departments have slightly increased, the principal excess has been in the Surgical Out-Patient Department, 45,368 visits having been made against 39,566 for the previous year. In the latter department there has been a division of labor, so that now there are two surgeons to out-patients on duty every week day instead of one. The Trustees desire to renew attention to the fact pointed out last year, that the work in the surgical out-patient building has increased to such an extent that the accommodations are totally inadequate. "It is only a question of time when the present one-story building must be replaced by a larger and more commodious structure."

SOUTH DEPARTMENT.

The statistics for the South Department for infectious diseases, for the year from February 1, 1896, to January 31, 1897, inclusive, are as follows:

Number of patients remaining in South Department January 31, 1896	202
Admitted from February 1, 1896 to January 31, 1897, inclusive	2,845
	<hr/>
Treated during the year	3,047
Discharged during the year	2,354
Died during the year	443
	<hr/>
	2,797
Number of patients remaining in South Department January 31, 1897	250
Largest number of patients in the South Department at any one time	273
Smallest number of patients in the South Department at any one time	83
Daily average number of patients	165 $\frac{51}{100}$
Average number of days' stay of patients	21 $\frac{2}{100}$
Number of weeks' treatment given in South Department	8,654

Number of days' treatment given in South Department	60,578
Number of applicants for admission to South Department	3,698
Number of applicants rejected	853
Number of patients admitted over 15 years of age	657
Number of patients dying within 24 hours of admission	105
Number of patients dying within 48 hours of admission	38
Average age of patients	10 $\frac{14}{100}$

There will be found on pages 52 to 62 a detailed account of the expenditures of this department, the various sub-divisions being kept the same as at the hospital proper. The approximate sum spent upon this department has been \$71,286.24, from which there should be deducted the difference in the amount of stock on hand February 1, 1897, which was \$1,040.21 more than we possessed on February 1, 1896. This gives \$70,246.03 as the sum charged upon the books to maintenance for the year. This sum expended upon 3,047 patients treated, and divided by 8,654 weeks' board, gives \$8.11 as the cost per patient per week. The total expenditure upon subsistence supplies was \$18,088.41, and the total number of weeks' board, of an average of 265 persons, was 13,818. This gives a weekly cost per person, for subsistence supplies, of \$1.30, or 18 cents per day.

The South Department has been heated from the powerhouse, in common with all the hospital buildings, and the fuel consumed has been charged to the South Department, based upon the amount of radiating surface to be heated. The cost for fuel was \$5,293.94; for medical supplies, \$4,572.24; for salaries and labor, \$29,620.15; for general repairs and various additions found necessary to complete the buildings, \$2,634.15; grounds, \$91.75; and for general supplies, \$10,985.60, making a total of \$71,286.24. As stated in our last report, this sum does not represent the entire expenditures chargeable to this department. Un-

doubtedly a proper percentage of the expenditures might be charged off for general corporation expenses, supervision, medical library, etc.; but this has not been done.

It was supposed, when the South Department was built, that the accommodations would be ample for several years to come. The hospital was constructed so as to give a liberal amount of cubic air space for 220 patients. There have been times, notable during the winter months, when additional beds and cribs, particularly the latter, were placed in the various wards and rooms.

It appears that the largest number of patients on any one day was 273. The number of patients remaining at the date of this report is 250, and the daily average 165. By reason of the restrictions, obviously placed upon the classification of patients with infectious diseases, it happened that some of the wards containing one disease were crowded, while there were plenty of vacant beds in wards for another disease. The hospital wards, however, based on the normal number of beds and cribs have practically been full at all times. It was the original intention that a third building should be added for the accommodation of patients with measles, but the appropriation was not sufficient, and it has not been constructed. There has been a very large demand for the admission of patients with measles, but the hospital has been obliged to refuse several cases. This group of buildings, sumptuous and well adapted to their purpose, cannot carry out the full scope of a hospital for infectious diseases until it has another building specially arranged and constructed for measles, necessary not only for an additional number of patients, but for the obvious purpose of better classification.

Of the 3,047 patients treated during the year, 657 were over fifteen years of age, and 2,390 under fifteen years of age; the experience of a year showing that 78 per cent of the patients treated has been children under fifteen years of age, and the majority under ten years.

The decrease in the death-rate of the hospital of patients having infectious diseases since the South Department was opened has been very gratifying. This has been owing to

several causes; the treatment in buildings specially designed for the purpose, so arranged as to carry out proper regulations not previously possible in a general hospital; the *régime* under a continuous service of resident physicians, and by the use of antitoxin, which has proved, as the Trustees believe, a great blessing.

In the old wards, from February, 1876, to February, 1894, under trying circumstances, antitoxin not being used, there was a mortality of 46 per cent; the average death-rate of all cases of diphtheria in the city for a period of sixteen years was 30.7 per cent. The death-rate of all diphtheria cases in the South Department for the hospital year was 14 per cent, even including more than one-third of the number who died within forty-eight hours after admission, and practically beyond medical aid. This subject will be more fully elaborated from a medical standpoint in the forthcoming (eighth) Medical and Surgical Reports. The saving of so large a percentage of patients, suffering from a disease so virulent as diphtheria, alone justifies the expenditure incurred in the new South Department.

DEATH-RATE, SOUTH DEPARTMENT.

	Patients treated.	Deaths.	Percentage of deaths
Diphtheria alone.....	1,889	276	14 per cent.
All other causes.....	1,158	167	14 " "
Total	3,047	443	14 per cent.
Of the 443 deaths, there died within forty-eight hours after admission.....		143	32 " " of all deaths.

There has been a larger demand than was anticipated for private rooms for patients who could pay for special accommodations. While there are strictly no rooms exclusively for private patients, we have been able, by associating two or three patients in a room, to accommodate a considerable number, and \$2,212.51 have been collected on account of such

patients. The department has been able to fairly satisfy the demand for this class of accommodations, and since the new department and its workings are gaining favor with the public, the demand is likely to increase rather than diminish. There have been frequent requests to receive patients suffering from infectious diseases from outside the city of Boston, but, with rare exceptions, in emergencies, they have not been admitted, there being only room enough for those who have a claim, by reason of residence within the city limits.

Considering the difficulties of the management of a department for infectious diseases and not always knowing in advance just what exigencies will arise, the Trustees are gratified to find that the various provisions have made the hospital run not only without friction, but with the greatest concert of action in its one purpose of treating infectious diseases. The domestic parts of the hospital, such as the kitchens and bakery, the dispensary, sewing room, laundry, dining rooms, etc., have proved very satisfactory for an infectious hospital. The Nurses' Home for this department can be independently sub-divided so as to give ample classification to groups of nurses attendant upon different diseases.

As might be expected, the nurses, on first going on duty in this department, in some instances have contracted scarlet fever and measles, particularly if they have not had the diseases previously, and there are occasionally cases of diphtheria, or diphtheria without clinical symptoms; but considering that the pay-roll contains over 110 names, of all classes of hospital workers, the amount of sickness has been very small, and the general health of the employees excellent. Very few patients admitted with one infectious disease have contracted another, though many patients have been admitted having more than one infectious disease.

The Trustees have endeavored to arrange the rules so as to reduce to a minimum the risk of infection between hospital workers and the public. As far as is known, not a single case of infectious disease in the community at large can be attributed to the fact that infection was carried from the hospital to the outside public. This will be more clearly

and excellently shown in a paper on the subject by Dr. McCollom, the Resident Physician, which will shortly appear in the eighth volume of the Medical and Surgical Reports of the hospital.

In proportion to the number of patients treated, the amount of ambulance work has been very large. Of the 3,047 patients admitted, 1,980, or nearly two-thirds, were brought to the hospital by our own ambulances, specially classified according to the disease of the patient. The Trustees desire it to be known that infectious diseases should be taken to the hospital in special conveyances, in order to decrease the spread of infection, and they are prepared at all times to send a special ambulance for any case that should be admitted to the South Department. Citizens should discourage any other method, and notify the Board of Health in case of infraction of this rule, obviously based upon safety and improvement of the public health. The public is also reminded that there is a special Mortuary Chapel in the South Department, where the friends of patients who have died can hold religious services, as the City Ordinances forbid the transportation of patients who have died with an infectious disease to a church or dwelling house, except by permission of the Board of Health.

The Trustees are gratified that the construction of this department of the hospital has been so good, and its reputation has become so extended that it is visited by hospital architects, boards of health, and hospital workers generally from all over the country. They further appreciate the compliments that have been bestowed upon the general arrangement of this department, as justifying their anticipations so confidently expressed in their last annual report.

TRAINING SCHOOL FOR NURSES.

The Training School for Nurses is now in the nineteenth year of its organization. There have been graduated 442 nurses, of whom thirty-six were graduated during the past year. There is now a total of 129 nurses, of whom ninety-one are at the hospital proper, thirty-six at the South Department and two at the Convalescent Home. The hospital has

been able to retain the services of a larger number of graduates, as head nurses in charge of wards, there now being twenty-five. The accommodations for nurses continue the same as last year, and the same inconvenience has been experienced for want of proper rooms. The accommodations for nurses at the South Department are excellent and more than sufficient for present purposes.

For several years the Trustees have dwelt, more or less urgently, upon the necessity of having increased accommodations for the nurses in the hospital proper, and they are very happy to announce that the hospital has received a bequest of \$100,000 from the trustees of the Ann White Vose estate, for the special purpose of constructing an additional Nurses' Home. This most fortunate and timely gift relieved the Trustees of further anxiety, and they expect during the coming year to erect a new house sufficient to accommodate not only the present force of nurses, but all that probably will be needed for any future increase of the hospital. It is intended that this home shall be the best of its kind, and the liberal amount of money donated for this purpose will allow most liberal and useful plans.

The annual number of applicants for admission to the school is constantly increasing, and allows a more careful selection of a higher grade of applicants than was possible a few years ago. The women who now apply are of much better education and general fitness. This enhances the value of the Training School as a whole for obvious reasons, and notably increases the good care and nursing received by the sick, which is the primary object of a Training School in connection with hospital nursing.

CONVALESCENT HOME.

The Convalescent Home has now been established five years, and continues to be a most excellent auxiliary to the hospital in affording as good accommodations as could be asked for the convalescence of women patients. The number of patients treated during the year has been 453, and the total number of days' board 8,927. The average weekly cost per patient was \$6.01. The beds have been more con-

stantly occupied than during any previous year, and patients who have once been admitted to the home are always anxious to go again, provided they are admitted to the hospital a second time. The trees and shrubbery placed upon the grounds five years ago have now developed and indicate their purpose in beautifying the surroundings. The appearance of the grounds, particularly in the springtime when the shrubbery is in full bloom, is well worth the visit of any lover of such things. The home continues under the supervision of Miss H. Josephine Shepherd, the Matron, whose management of the home has been good.

MEDICAL AND SURGICAL STAFF.

The following are the changes in the Medical and Surgical Staff:

We chronicle the death of W. C. B. Fifield, M.D., Consulting Physician and Surgeon, which occurred October 6, 1896. Dr. Fifield was for fifteen years one of the Visiting Surgeons, and after resignation was made a Consulting Physician and Surgeon. Dr. Fifield received the best surgical education to be had in foreign schools of his day; he was learned in the bibliography of medicine, possessed a phenomenal memory, was rich in a knowledge of his craft, rendered signal service to the welfare of the hospital, and was beloved by his patients.

The Trustees regret to record the death of Dr. Edward J. Forster, late Visiting Physician for Diseases of Women. Dr. Forster, in various capacities, was connected with the hospital for sixteen years, and the Trustees have placed upon record their high appreciation of the service and character of Dr. Forster as follows:

“Dr. Forster had been for many years, and was, at his decease, a member and secretary of the Visiting Staff of the hospital. In the performance of his duties he was earnestly conscientious, unwearying and efficient; he served his patients with kindness of heart and persistent devotion, and he gave his associates sterling generosity and helpful intelligence. In his decease the hospital has lost a devoted helper, his associates a faithful friend, and the community a valuable

and public-spirited citizen. "The Trustees further desire to express to his family their deep and sincere sympathy for them in their bereavement."

Carroll E. Edson, M.D., Physician to Out-Patients, Edmund D. Spear, M.D., Aural Surgeon to Out-Patients, and Alex. Quackenboss, M.D., Assistant to the Ophthalmic Surgeons, have resigned. C. M. Green, M.D., has been promoted from Assistant Visiting Physician for Diseases of Women, to Visiting Physician for Diseases of Women. George Haven, M.D., has been promoted from Physician for Diseases of Women to Out-Patients, to Assistant Visiting Physician for Diseases of Women. Edward Reynolds, M.D., has been promoted from Assistant to the Physician for Diseases of Women, to Physician for Diseases of Women to Out-Patients. Ernest E. Doble, M.D., has been promoted from Assistant to the Aural Surgeons, to Aural Surgeon to Out-Patients.

The following appointments have been made during the year: George F. Harding, M.D., Physician for Diseases of the Skin; John L. Ames, M.D., Benjamin Tenney, M.D., and H. D. Arnold, M.D., Physicians to Out-Patients; William J. Daly, M.D., Assistant to the Ophthalmic Surgeons; Edgar M. Holmes, M.D., Assistant to the Aural Surgeons; Frank A. Higgins, M.D., Assistant to the Physician for Diseases of Women.

John C. Bossidy, M.D., has been promoted from Assistant to the Ophthalmic Surgeons, to Ophthalmic Surgeon, to Out-Patients, the number of Ophthalmic Surgeons having been increased from two to three. Richard M. Pearce, M.D., was appointed to a new position created, namely Second Resident Assistant Pathologist.

During the year three other new positions have been created, namely, an additional Assistant Physician for Diseases of the Skin, an Assistant to the Physicians for Diseases of Women, and also the office of Gynæcological Clinical Clerk.

During the year the Trustees have received a framed portrait of Dr. Henry I. Bowditch, for many years a Visiting Physician to the hospital and one of the most distinguished physicians of Massachusetts in his profession.

They have also received a portrait of the late Dr. O. W. Doe, formerly Visiting Physician. This portrait was presented by fifty house-officers, who formerly worked under him in the hospital. This gift was a grateful expression of their love and appreciation of his character.

The new rules affecting the appointment and promotion of house-officers, mentioned in the last annual report, have given even better results than the Trustees anticipated. Under the present regulations, house-officers are only appointed for six months, and are promoted every six months upon the recommendation of the Visiting Staff, such recommendation being based upon the record of their work and conduct, made by the Medical and Surgical Staff under whom they have worked. This regulation has stimulated the best work on the part of the house-officers, and has notably increased their efficiency in many ways, not wholly professional. There are now in all the departments thirty-nine house-officers, including all grades.

GIFTS, BEQUESTS, AND PERSONAL ASSISTANCE.

The Trustees take great pleasure in officially announcing that the hospital has received during its present year two donations.

Through the thoughtful and generous kindness of Messrs. George White and Francis C. Welch, Executors of the will of the late Ann White Vose, the Hospital has been presented with the munificent residuary legacy of \$100,000, this specific gift to be expended in the erection of a new building for hospital nurses. This liberal and magnificent gift comes to the Trustees at the very close of the year, and they desire to thus publicly express their gratitude for the same.

The Trustees have also received during the year the gift of \$1,000 from Mr. Townsend William Thorndike of Boston, who desired that the same should be invested, and the income given in money, semi-annually, to the house-officer who administers ether, or other anæsthetic, in the most skilful and humane manner. He desired that this bequest should be known as the "Herbert L. Burrell Ether Prize Fund," and

that the interest of this specific gift should be applied by the Trustees according to the wishes of the donor.

The Trustees desire to renew the suggestion offered in previous reports, that public-spirited citizens can in no way better contribute to the well-being of the public, particularly by way of charity, than by donating money to the hospital, for the support of free beds, or such other specific purposes as they may deem best. The sums of money contributed by citizens in various parts of the United States in recent years, have been notably frequent, and in many cases, very large in amount. No object can appeal more strongly to generously disposed citizens than the welfare of the sick. Of all charities, it is the first and greatest.

The Trustees again return their annual acknowledgments to the many friends of the hospital, who, in various ways have contributed to the welfare, comfort, and encouragement of the sick. The various charitable organizations, which in previous years have done so much of this charitable work, still continue their benefactions. The Episcopal City Missionary Society, the various Flower Missions and Easter Song Mission, have faithfully continued their service. Hospital visitors, clergymen, Bible readers and others still continue their kind offices. To those who have contributed flowers, clothing and toys, particularly at Christmas and Easter, both known and unknown, the Trustees return their grateful acknowledgments.

The Trustees again wish to express their appreciation of the valuable services of their Superintendent, Dr. Rowe, as also those of Dr. J. H. McCollom, Resident Physician of the South Department, the Matron, the House Officers, the Nurses and general employés, for their painstaking efforts for the welfare and comfort of the patients of the hospital.

For the Trustees,

A. SHUMAN, *President.*

REPORT OF THE SUPERINTENDENT AND RESIDENT PHYSICIAN.

THE BOSTON CITY HOSPITAL, January 31, 1897.

To the Trustees :

GENTLEMEN : I have the honor to present herewith my annual report of the hospital for the year, February 1, 1896, to January 31, 1897, inclusive.

The following table shows the number of patients who have each year applied for admission, and been treated at the hospital :

	Patients examined for ad- mission.	Patients admit'd.	Patients accident- ally injured.	Number of out- patients treated.
From June 1, 1864, to December 31, 1864 (7 mos.)	703	475	129	371
From January 1, 1865, to December 31, 1865...	1,451	1,066	242	1,143
From January 1, 1866, to December 31, 1866...	1,749	1,432	345	3,324
From January 1, 1867, to December 31, 1867...	1,913	1,534	328	7,015
From January 1, 1868, to December 31, 1868...	2,729	2,078	417	8,794
From Jan. 1, 1869, to April 30, 1870 (16 mos.)..	4,632	3,054	482	11,791
From May 1, 1870, to April 30, 1871.....	3,977	2,396	525	8,899
From May 1, 1871, to April 30, 1872.....	4,387	2,873	565	8,947
From May 1, 1872, to April 30, 1873.....	4,326	3,304	660	7,526
From May 1, 1873, to April 30, 1874.....	4,250	3,201	804	9,272
From May 1, 1874, to April 30, 1875.....	4,652	3,424	756	8,732
From May 1, 1875, to April 30, 1876.....	4,434	3,180	689	9,413
From May 1, 1876, to April 30, 1877.....	4,713	3,580	663	8,526
From May 1, 1877, to April 30, 1878.....	5,068	4,034	604	9,658
From May 1, 1878, to April 30, 1879.....	5,285	4,323	734	10,419
From May 1, 1879, to April 30, 1880.....	5,444	3,995	505	10,309
From May 1, 1880, to April 30, 1881.....	5,781	4,418	553	10,605
From May 1, 1881, to April 30, 1882.....	5,842	4,107	567	12,035
From May 1, 1882, to April 30, 1883.....	5,991	4,423	666	12,174
From May 1, 1883, to April 30, 1884.....	6,152	4,780	531	14,241
From May 1, 1884, to April 30, 1885.....	6,072	4,831	676	12,005
<i>Carried forward.....</i>	89,551	66,508	11,441	185,199

	Patients examined for ad- mission.	Patients admit'd.	Patients accident- ally injured.	Number of out- patients treated.
<i>Brought forward</i>	89,551	66,508	11,441	185,199
From May 1, 1885, to December 31, 1885 (8 mos.)	3,965	3,229	562	8,271
From January 1, 1886, to December 31, 1886...	6,086	5,046	757	12,733
From January 1, 1887, to December 31, 1887...	6,682	5,577	790	13,124
From January 1, 1888, to December 31, 1888...	7,406	5,875	709	13,383
From January 1, 1889, to December 31, 1889...	8,274	6,157	888	13,605
From January 1, 1890, to December 31, 1890...	8,101	6,473	1,079	12,983
From January 1, 1891, to Jan. 31, 1892 (13 mos.)	10,507	7,494	1,331	15,560

<i>Net cost to the City for maintaining Hospital proper</i>						\$192,481 32

The foregoing tables of disbursements show the total expenditures of the Hospital Department during the fiscal year February 1, 1896, to January 31, 1897, inclusive. Table No. 1 tells the distribution throughout all the departments, according to the general subdivisions, and includes statistics of the department divided into the Hospital proper, Out-Patient Departments, Pathological Building, Settlement Account, South Department, Convalescent Home and new buildings. Table No. 2 shows the distribution for the year for the same departments, itemizing the various subdivisions, and includes, for all practical purposes, the quantity, cost, and average price paid for the various items. Table No. 3 is a résumé of Tables 1 and 2, so distributed as to indicate the actual cost of each department, and, after deducting stock on hand at the beginning and close of the year and various items not chargeable to any one department, the net cost to the city for maintaining the Hospital proper for the year.

The City Council, and the citizens at large, are, as a rule, only interested in the expenditures of the Hospital Department as a whole, but hospital expenditures have become a study, and an estimate has been made by various tables to show the running expenses of the subdivisions, particularly the Hospital proper. This is deemed advisable, not only to fairly indicate the method of expenditures, but also that those interested in hospital management may be able to make comparisons with other hospitals. Many attempts have been made for a uniform system of hospital accounts, particularly among the English hospitals, but the conditions of management, the methods of securing the income and disbursing expenditures, are so different, that it is a difficult matter. It is intended, however, in the preceding tables, to bring out the facts, particularly in regard to disbursements, so that students of hospital management may draw deductions from which to make comparisons.

The total expenditures during the fiscal year for the Hospital Department in all its various branches have been \$341,331.14, and the disbursements have been distributed as follows :

The Boston City Hospital proper	\$243,906.15
Out-Patient Department	8,417.32
Pathological Building	5,710.20
Settlement Account	1,825.28
South Department	71,286.24
Convalescent Home	7,668.47
New Buildings	2,517.48

The Hospital Proper.—The hospital proper is divided into four divisions : The Hospital, Out-Patient Department, Pathological Building and Settlement Account. It is obvious that the Out-Patient Department and the Settlement Account have nothing to do with the pro rata cost of each hospital bed. The cost of the Pathological Building is not excluded from the pro rata cost per patient, but for executive reasons, is tabulated in order to ascertain the cost of running that department. For obvious reasons the South Department, Convalescent Home and expenditures for new buildings are shown in separate columns.

South Department.—The South Department began the year with 202 patients, and during the year the maximum number on any one day was 273. In Table No. 2, page 57, the same classification has been adopted as to distribution, as in the Hospital proper, in order to show the comparative cost of a general hospital and a special department for infectious diseases. The contracts for miscellaneous supplies were made by the Superintendent of the Hospital, under the supervision of the Trustees, and, as a rule, the same prices were obtained for the South Department as for the Hospital proper. The total expenditure for the South Department was \$71,286.24, but deducting from this amount the difference in stock on hand at the beginning and close of the year, \$1,040.21, leaves a balance of \$70,246.03, which more properly represents the maintenance expenditures of this department for the fiscal year. This sum total is much less than it would be if the department were not attached to the hospital organization, because in many instances, general corporation expenses, not easily deducted, have been charged to the hospital account, which otherwise the South Department would have been obliged to meet. The general distributions, however, are fairly well shown.

Out-Patient Department.—The expenditures for this department have been for expenses ordinarily included, and the total amount was \$8,417.32.

Convalescent Home.—The expenditures for the Convalescent Home have been for the usual purposes, and were \$7,668.47, which is an increase of less than \$200 over the previous year.

New Buildings.—There have been expended from the hospital appropriation, necessary to complete the various new buildings, the following sums:

Boiler-house	\$9.36
Pathological Building	535.67
Pathological Laboratories (furnishing)	1,444.88
For completing and furnishing new buildings	207.10
Furnishing new Surgical Building	320.47
Total	<hr/> \$2,517.48

The expenditures for the Hospital proper were partly for ordinary maintenance, and partly for improvements or special subdivisions. Table No. 3 shows that the total expenditure for the department was \$341,331.14. After deducting the maintenance of the sub-departments and money spent for new and special purposes not within the ordinary scope of the maintenance of ward beds, and after allowing for the difference in the amount of stock on hand at the beginning and close of the year, the net cost to the city for maintaining the Hospital proper was \$192,481.32.

The tables further show that the *actual cost* of maintaining the Hospital proper for the fiscal year was \$241,298.24. This sum was expended upon the care of 8,393 patients in the wards for 169,619 days' board, or 24,231 weeks, making an average weekly cost of \$9.95, or a daily cost of \$1.42 per hospital patient of all classes. This total cost of maintenance, and weekly cost per patient, represent the statistics usually found in hospital finances. The weekly cost per patient, as usually computed in hospital reports, was \$9.95, but the net cost to the city was only \$7.94.

In considering the cost of hospital maintenance, it should be stated that the cost of subsistence supplies was not only for patients, but for the household, including all grades. The total expenditures upon subsistence supplies for the Hospital proper was \$76,275.08. The total number of weeks' board of an average of 768 persons was 40,170. This will give a weekly cost per person for subsistence supplies, of \$1.89, or 27 cents per day.

There has been collected and paid into the City Treasury during the year, \$46,291.04, on account of all classes of paying patients, as follows :

From State cases	\$19,435.93
From Town and City cases	7,572.56
From private and ward-paying patients	17,070.04
From the South Department	2,212.51

There has been received \$1,400 interest from Trust Funds for the support of free patients, and \$85.67 for the sale of old materials. These sums, amounting to \$47,776.71, were

paid in cash to the City Treasury, and should be credited to the appropriation received. This would reduce the net cost to the city for the Hospital Department, for all purposes during the fiscal year, to the sum of \$293,554.43, and for the Hospital proper, \$192,481.32.

The expenditures upon 20,562 out-patients has been \$8,417.32.

Statistics of the number of out-patients, the number of their visits, the rates of mortality, the work of the ambulances, the occupation, nativity, ages, civil condition and physical condition of patients when discharged, are elsewhere tabulated, and may prove of interest in connection with hospital data.

The maximum number of patients on any one day was 500, as against 533 last year; the minimum number was 431, against 373 last year; the daily average during the year was $463\frac{43}{100}$, against $448\frac{43}{100}$ last year. The average length of stay was $20\frac{20}{100}$ days, against $19\frac{39}{100}$ last year.

The total expenditures for the Convalescent Home have been \$7,668.47. Its benefits have been given to 453 persons, who have received in all 8,927 days' board, or 1,275 weeks, at a weekly average cost of \$6.01 per patient.

The total number of deaths from February 1, 1896, to January 31, 1897, was 835. This does not include the statistics of the South Department.

Of the deaths, there occurred within 48 hours

of admission	326 or .039
Other deaths	509 or .060
Total	<hr/> 835 or .099

the rate of mortality for the year ending January 31, 1897.

The percentage of deaths given is for the total number of patients treated in the hospital. Of all patients admitted, 326 died within 48 hours after admission, which indicates that they were brought to the hospital in a dying condition, and medical aid could not change the result. It will further be noticed that this number is 39 per cent of the total deaths.

During the year, 8,393 patients have been treated in the wards, 20,562 as out-patients, 453 at the Convalescent Home, and 3,047 at the South Department,—a total of 32,455 who have received the benefits of the hospital in all departments.

During the year 11,396 persons applied for admission. Of this number 7,941 were admitted and 3,455 were rejected, the latter number being 178 less than last year. The number rejected was 30 per cent of all persons applying. The causes of rejection appear in the table of applicants not admitted, on pages 26 and 32. Of the number not admitted, 429 either changed their minds or were deferred. Of this number, however, 264 were admitted within three days after application. There were also rejected 679 solely for want of vacant beds, but 309 were admitted within three days. There were 450 patients who could be treated in the various out-patient departments, without the additional cost of treating them in the wards. Admission was denied to 260, because information could not be obtained to indicate that they were suitable cases. There were transferred to other and more appropriate institutions 277, and 83 were rejected as clearly incurable and unsuitable for treatment. Various other lesser causes for rejection appear in the tabulated form.

On pages 43 and 49 will be found a record of the ambulance work, showing the number of trips and the number of patients brought to and carried from the various departments of the hospital. The total number of persons carried during the year was 5,414, of which 3,434 were for the Hospital proper and 1,980 for the South Department. There are now six ambulances in active use, and during the past year the work in this department has been systematized and improved, not only for the convenience of those who transport patients, but for the comfort of the patients themselves. The style of ambulances used by the hospital is equal, if not superior, to those in general use. Rubber tires have been placed on all the ambulances, and they have been found not only to ease transportation, but also lessen the cost of repairs on the various vehicles. The odometers, placed on all the ambu-

lances, have kept a daily record of the number of miles run, making a total of 19,945 miles for the year. A single ambulance has frequently run, with different horses, 36 miles a day, and an ambulance, with rubber tires, travelled 6,500 miles before it showed any signs of inefficiency. The number of accident cases received was 1,991.

The capacity of the Hospital proper has been slightly increased. Last year there were 482 beds; this year there are 512. Ward N, for private surgical patients, and Ward O, for surgical children and women, were closed in October, on account of the reconstruction of that section of the Surgical Building. Ward A, formerly the scarlet fever ward, is now occupied by surgical women and children from Ward O; and Ward E, formerly the diphtheria ward, is occupied by

surgical male patients — part free and part paying. Neither of these diseases has appeared among the cases since treated in these renovated wards. Wards W and X were organized and opened to patients in October last, giving an increase of 59 beds; Ward W being for male surgical cases and Ward X for female surgical cases.

There has been an increase of 2,822 in the total number of out-patients treated, and an increase of 9,644 in the number of visits. In the various out-patient departments, 20,562 patients were treated, or 2,822 more than last year. There were also 75,440 visits to the hospital from out-patients, or 9,644 more than last year. This indicates an increase in the number of patients treated, and the number of visits, in nearly all the departments, and largely in the surgical out-patient department.

During the year the sum of \$16,839.15 has been expended upon buildings and internal improvements, and \$1,267.41 upon grounds, including roads and sewers. Many older buildings in the hospital group, built many years ago, under cheaper forms of construction, constantly require considerable expenditures to keep them in good repair. Outside wooden construction deteriorates rapidly, and the public uses of the buildings bring upon the interior unusual wear and tear. Parts of the roofs and gutters demand frequent repairs, and are a constant source of expense. The wooden balconies on Wards B and F, after 30 years' use, have been removed, and new balconies constructed, at a cost of \$872.42. The decayed and unsafe wooden balconies on the north-west end of Wards B and F have been replaced by wrought-iron balconies at a cost of \$605. The rear stairways for four stories in Pavilions I. and II. were entirely replastered, both walls and ceilings, and wainscots of hard pine added, and general repairs were made throughout the stairways. The inadequate food elevators were torn out in four buildings, and new ones substituted at an expense of \$495. The administration building was painted, both exterior and interior. Porcelain bath tubs, with new sinks and general plumbing alterations, were made in Wards R, S, K and L, thereby adding improvements long demanded

and bringing these appointments to the latest standard. The plumbing in Ward T, and Ward T chambers, has been partially renewed. Wards P and T were vacated during the summer months, and the entire wards rekalsomined, painted and renovated, including all furniture and interior fittings. The fire pots under six boilers were renewed, which, with new grates in part, involved an expenditure of \$1,048.21. Numerous other repairs were made in various parts of the buildings, too many to enumerate, the total expense of which was \$16,839.15.

The telephone system inserted last year has worked admirably, and has enabled the hospital to do business with a despatch not before possible. In addition to the 71 house telephones, there are now five telephones in the various buildings connected with the general city circuit, the increase of business requiring that number to give the public proper facilities, and for the efficient conduct of the hospital affairs.

During the year a system of fire hydrants has been placed upon the grounds, and stand-pipes in the various buildings, so that it is now possible to reach every room throughout the hospital with fire hose from standpipes; the total number now being 101 within doors, and nine hydrants upon the grounds. This affords the security long desired, and gives facilities to readily extinguish an incipient fire.

The statistics for the Convalescent Home, which has just completed its sixth year, are as follows:

Number of patients in home at the beginning of	
the year, January 31, 1896	26
Admitted during the year	427
	<hr/>
Total treated during the year	453
Discharged during the year	432
Died during the year	0
	<hr/>
Total discharged	432
Number remaining in home January 31, 1897	21
Largest number on any one day	34
Smallest number on any one day	12

Daily average number of patients	24
Average length of stay in days	20

The daily average at the home was 24, and the weekly cost per patient has been \$6.01, as against \$6.24 the previous year. As the Convalescent Home is becoming better known to patients, requests for transfer from the hospital to the home have been more frequent, and recommendations for transfer are more readily accepted. The improvements for five years upon the grounds, especially in the way of grading, and lawn and shrubbery, have beautified the estate and made it a most attractive place for convalescent patients, particularly during the summer months.

The Medical Library has been increased during the year by 115 volumes, 78 being by purchase and 37 by donation. The total number of volumes at the close of the year was 3,249. The library has also received 928 periodicals and 431 medical monographs or pamphlets.

The card catalogue of the clinical case books is still continued, and there are now 140,907 cards of reference and cross reference. This completes the case books of all the hospital services for fifteen years, and the surgical services for nineteen years. The catalogue is utilized more and more each year, and has become very valuable.

The Ward Libraries have been renewed from the income of the Goodnow Library Fund, until there are libraries of between 50 and 60 volumes in the nineteen wards. Many of the books, particularly fiction, adventure and biography, show extensive use, and in many cases have been completely worn out. These libraries, together with large numbers of odd volumes, illustrated papers and magazines, afford much entertainment for patients. During the last year many wards received the pleasing addition of potted palms and foliage plants in jardinieres set on pedestals, and fine, large photographs, in broad oak frames, have been hung on the walls, adding much to the cheerfulness and pleasing aspect of the wards.

The Training School for Nurses has finished its nineteenth year. The changes during the last year have been as follows :

SUMMARY FROM FEBRUARY 1, 1896, TO FEBRUARY 1, 1897.

February 1, 1896, the number of nurses was . . . 123

During the year nurses have left as follows :

Have been graduated	36	
Graduate head nurses resigned	7	
Pupils dropped for various causes	6	
Probationers not accepted	11	
Withdrawal of graduate special nurse	1	
	—	
Total vacancies		61
Number remaining		<u>62</u>
Graduates retained as head nurses	9	
Probationers admitted	54	
Pupil nurses re-admitted	2	
Graduate special employed	2	
	—	67
Remaining January 31, 1897		<u><u>129</u></u>

Nurses connected with the school, in the Hospital proper,
February 1, 1897 :

Assistant superintendents of nurses	3	
Graduate head nurses	14	
Senior pupils acting head nurses	5	
Senior assistant nurses	41	
Junior assistant nurses	19	
Probation nurses	7	
Graduate special nurses	2	
	—	91

In the South Department, February 1, 1897 :

Day supervisor of nurses	1	
Night supervisor of nurses	1	
Graduate head nurses	4	
Senior assistant nurses	8	
Junior assistant nurses	22	
	—	36
Graduates at the Convalescent Home		<u>2</u>
Total		<u><u>129</u></u>

The Training School has graduated during the year 36 nurses, making a total of 442 since the formation of the school. The Superintendent of Nurses and her assistants have given 226 class recitations at the Hospital proper, and 193 at the South Department, making a total of 419. The school has received 34 lectures on Friday afternoons from the members of the Medical and Surgical Staff or others. Eighty-four classes in *massage* were conducted by Mrs. Bertha J. Raemisch, with four to eight pupils in each class. The course of instruction in practical cookery for the sick continues under charge of Miss Mary A. Boland. The number of lessons for each class has been increased and more hours devoted to each lesson, and an additional number of lectures has been given to the entire school. Thirty-two cooking lessons have been given in classes. The entire course of instruction will be found on page 186, and the distribution of studies on page 187.

The number of nurses is slightly larger than last year, being 129,—an increase of six; four more were assigned for duty in the Hospital proper and two in the South Department. There has been a slight increase in the number of graduates appointed as assistants and head nurses, with a present total of 25. The work in the wards has been more satisfactory than in the previous year, when an unusually large number of probationers were admitted on account of the opening of the new South Department.

The accommodations for nurses in the Hospital proper are still inadequate. This will be obviated by the completion of the additional house for nurses to be erected from the bequest of \$100,000 received from the Trustees of the Ann White Vose estate, and given specially for this purpose. This rearrangement will enable us to better classify nurses according to the length of stay, their rank in the school, and will give special and quiet quarters for nurses on night duty, and for the domestics employed in both of the nurses' houses.

The health of the nurses in the Training School has been good, and the sickness less than for several years, except in the South Department for infectious diseases, where nurses

were sometimes infected with scarlet fever, diphtheria or measles.

The Nurses' Club has continued its monthly meetings for the greater part of the year. The meetings are more largely attended by non-resident graduates. The following are in part the topics of lectures or discussions: Lecture on "Diphtheria and the use of Antitoxin," by Dr. McCollom; "Miscellaneous Topics Relating to Nursing;" "An Exhibit of Nursing Appliances;" "The Uses of Hospitals and Pathological Laboratories," by Dr. Councilman, with an inspection and demonstrations in the Pathological Laboratory; Discussion, "The Ethics of Nursing, as adopted by the Alumnae Association of the Johns Hopkins Training School for Nurses;" Discussion on the following papers: (1) The History and Aims of District Nursing in Boston; (2) The Experience of a Day in District Nursing; (3) The Work with Children in District Nursing; (4) The Charitable Associations with which the District Nurses come in Contact; (5) The Contagious Diseases met in District Nursing. The resident members of the Nurses' Club gave an "At Home" for all the members of the Club on Christmas eve, and at the February meeting the Club enjoyed a lecture by Prof. Edward S. Morse of Salem, on "The Women of Japan." During the past year, the graduates of the Training School have formed an Alumnae Association, which meets occasionally at the hospital.

The number of books in the general library at the

Nurses' Homes at the beginning of the year was	. 598
Nurses' Home, Hospital proper, additions	. . 2
In general library February 1, 1897	. . . <u>600</u>
Number of text-books at beginning of year	. . . <u>226</u>
Additions 9

South Department:	
Nurses' Home East 64
Nurses' Home West 26
Parlor libraries <u>90</u>
Training School text-book library 54

making a total in all of the nurses' libraries of 979 books, of which 690 are general reading and 289 text-books.

I desire to express my appreciation of the work and conduct of the nurses in the Training School. No group of hospital workers is so closely identified with the cure or care of the sick, and they deserve the sincere thanks, not only of the patients themselves, but of all those charged with the responsibilities of a large general hospital.

The Boston City Hospital Medical Society has continued its monthly meetings except during the summer months, in the Medical Library. The attendance has been large, and, as a clinical society, made most instructive by showing a large number of unusual and interesting cases. The work of the society will be more fully set forth in the Medical and Surgical Reports.

In the achievements of the year, my thanks are due to the various heads of departments associated with me in the management of the hospital. I appreciate and gratefully acknowledge the coöperation they have given, which entitles them to a share in the successes of the year.

The house-officers have been faithful and conscientious in the discharge of their laborious duties, and have contributed largely to the care and comfort of the sick. Officers, male nurses, and employees, have, with few exceptions, been diligent and trustworthy in their work and spirit, and I desire to publicly thank them for their good work.

My obligations are cordially rendered to the gentlemen of the Medical and Surgical Staff for their advice and coöperation, always valuable and sincerely appreciated.

In presenting my eighteenth annual report to the Trustees, I most cordially acknowledge my gratitude for their support and guidance in enabling me to execute their plans.

I have the honor to be,

Your obedient servant,

G. H. M. ROWE,

Superintendent and Resident Physician.

MEDICAL AND SURGICAL STATISTICS.

MEDICAL DISEASES.

Classified according to the Nomenclature of Diseases, as published by the Royal College of Physicians of London and American Medical Association.

From February 1, 1896, to January 31, 1897, Inclusive.

DISEASES.	In Hospital Feb. 1, 1896.	ADMITTED.			DISCHARGED.						Remaining in Hospital Jan. 31, 1897.
		Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	Total.	
ACUTE GENERAL INFECTIOUS FEVERS.											
Typhoid Fever.....	30	260	147	407	342	18	8	44	412	25

BEQUESTS.

GOODNOW FUND. — ELISHA GOODNOW, of South Boston, who died in the year 1851, bequeathed to the city "all the rest and residue of my estate, real and personal, not otherwise disposed of," for the purpose of establishing in the Eleventh or Twelfth Wards of the city a hospital for the sick; one-half of said fund to be applied for the establishment and maintenance of free beds, which should always be at the disposal and under the control of the officers of the government of said hospital for the time being. Under this will the city came into possession of \$26,000 for the support of free beds.

NICHOLS FUND. — LAWRENCE NICHOLS, who died in September, 1862, made a bequest to the city of the sum of \$2,000 for "the establishment and endowment of a city hospital."

NORCROSS FUND. — 1868, January 1. The Trustees received the sum of two thousand dollars from Hon. OTIS NORCROSS, as the foundation of a fund for the benefit of patients leaving the hospital poor and destitute of proper clothing.

Balance on hand, February 1, 1896 . . .	\$438 00
Received interest	100 00

538 00

Expended	293 38
--------------------	--------

Balance, January 31, 1897	\$244 62
-------------------------------------	----------

BALL FUND. — 1870, April 1. The Trustees received from the estate of Mr. JONAS BALL the sum of one thousand dollars for the same purpose, and under the same restrictions, as the Norcross Fund.

Balance on hand, February 1, 1896 . . .	\$159 68
Received interest	40 00

199 68

Expended	42 00
--------------------	-------

Balance, January 31, 1897	\$157 68
-------------------------------------	----------

GOODNOW LIBRARY FUND. — 1874. Donation of GEORGE GOODNOW, the interest of which to be expended annually by the Board of Trustees in replenishing the library of the hospital with books and pamphlets suitable for the reading of the patients during convalescence.

Balance on hand, February 1, 1896	.	.	\$51 08
Received interest	.	.	40 00
			<hr/>
			91 08
Expended	.	.	50 12
			<hr/>
Balance, January 31, 1897	.	.	\$40 96

SHAW FUND. — 1875. Bequest of the late MARY LOUISA SHAW, the income of which to be expended by the Trustees for the purchase of flowers and fruit, for the use and comfort of the patients in the hospital.

Balance on hand, February 1, 1896	.	.	\$323 55

<i>Hemenway Fund.</i> — One certificate city of Boston four per cent bonds	5,000 00
<i>Herbert L Burrell Ether Prize Fund.</i> — Money in city Treasurer's office awaiting investment,	1,000 00
	<hr/>
	\$49,500 00

The "Act to incorporate the Trustees of the City Hospitals of the city of Boston" (see Acts and Resolves, 1880, chap. 174, approved April 7) provides that "money received by it shall be invested by the Treasurer of the city of Boston under the direction of the Finance Committee of said city; and all securites belonging to said corporation shall be placed in the custody of said Treasurer; provided always that both the principal and income thereof shall be appropriated according to the terms of the donation, devise, or bequest, under the direction of said corporation."

HOUSE RULES.

WITH RULES FOR ADMISSION, DISCHARGES, AND GOVERNMENT OF PATIENTS; ALSO RULES FOR VISITORS.

HOUSE RULES.

All employees shall be in their respective places during the hours of duty.

The doors and gates of the Hospital will be closed at 10 o'clock P.M., at which time all inmates shall be quiet, and all not on duty shall be in their rooms.

A record shall be kept of all persons entering the Hospital between the hours of 10 P.M. and 7.30 A.M.

No employees shall be absent from the Hospital, except as permitted by special rules or by the Superintendent.

The use of tobacco, wine and intoxicating liquors is prohibited within the Hospital, unless prescribed by a physician or surgeon.

All profane and obscene language, loud talking and incivility are prohibited.

All employees shall observe such further rules and directions for their conduct as may from time to time be established.

ADMISSION OF PATIENTS.

Applications for admission of patients may be made at the Hospital on each day of the week.

Whenever able the patient shall apply in person. When not able to apply in person, on application made by a friend the patient may be visited at his residence.

Any Trustee, or either of the physicians or surgeons in attendance, may, in case of emergency, send a patient in the first instance to the Hospital by written permit.

Persons accidentally wounded, or otherwise disabled or injured, shall be received at all hours.

Permits for admission shall be subject to the approval of the Visiting Committee, and the committee shall, except as above, have power at any time to require the Superintendent to report to them the names of applicants before admitting them, and may dismiss any patient whom they think improperly admitted, or change the terms of admission.

Patients may be admitted by the Trustees to the privileges of the Hospital at such rates of board as the Trustees may from time to time determine, payment for such board being secured by the friends of the patients, or by the authorities of the city or town to which the patients belong.

Whenever in the opinion of the Trustees the circumstances of the patient will warrant it, the whole or part of the board shall be paid. If separate apartments or articles not usually furnished at the Hospital are provided, such payment shall be made therefor as the Trustees shall deem reasonable.

No person having acute venereal disease or alcoholism shall be admitted except as a paying patient.

No person shall be admitted to the Hospital whose case is judged to be incurable, unless there be urgent symptoms which are deemed capable of being relieved.

DISCHARGE OF PATIENTS.

Patients shall be discharged by the Superintendent as before provided.

Patients discharged on the recommendation of the physicians or surgeons shall be provided with a certificate, stating their condition at the time of discharge, whether cured, relieved, or not relieved, which certificate shall be signed by the Superintendent.

Whenever a patient is removed from the Hospital without the approval of the Superintendent, a written statement to that effect shall be required from any person assuming the responsibility of the removal.

In case of the decease of a patient the Superintendent shall sign the death certificate. He shall also state the time and cause of death, the disposition made of the body, whether delivered to friends or buried from the Hospital, in which latter case he shall mention the place of interment.

The body of any person dying at the Hospital shall not be delivered without a written receipt from the parties taking the same.

GOVERNMENT OF PATIENTS.

Patients shall implicitly observe all the rules of the Hospital.

Patients shall be in their proper places in the wards during the visits of the physicians and surgeons, between 2 and 3 o'clock on visiting days, and always by 7.30 o'clock P.M., unless specially excused by the Superintendent.

Such free patients as are able shall assist in nursing, and in such other services as may be reasonably required of them.

No patient shall leave the Hospital grounds without a pass from the Superintendent, nor his ward without the consent of the nurse in charge.

No patient shall purchase, or cause to be purchased for him, any article of food whatsoever, tobacco nor any other article, without the consent of the Superintendent.

Profane and obscene language, loud talking, and incivility are prohibited.

Patients may be visited by clergymen of their own selection, and any wish for the performance of any particular religious rite shall be indulged when practicable.

Complaints, for whatever cause, may be made to the Superintendent or Visiting Committee, and when reasonable shall be by them reported to the Trustees.

VISITORS.

No person shall visit any part of the premises except on business, or at such time as may be fixed for the reception of visitors, without the permission of the Superintendent or of some one of the Trustees.

On week days from 2 to 3 o'clock P.M. friends may be permitted to visit patients, though no patient shall receive more than two visitors on the same day. In all cases, however, the Trustees or Superintendent may exercise discretionary powers as to excluding or admitting visitors.

Patients who are considered dangerously ill are permitted to see friends in reasonable numbers, and at reasonable hours during the day, but friends visiting such patients should not remain later than 8 o'clock P.M., and are not permitted to remain after that hour, or all night, unless it seems probable that such patients will not live through the night.

All visitors shall leave the Hospital when the bell rings at the expiration of the regular visiting hour.

No visitor shall take any meal in the Hospital, or pass the night therein, without permission from the Superintendent or one of the Trustees.

No visitor shall be allowed to give any article of food, tobacco or drink to a patient, unless by permission of the nurse; and any article sent to a patient shall be left at the entrance office or at the Superintendent's office.

RULES OF THE CONVALESCENT HOME.

The department of The Boston City Hospital, located at No. 2150 Dorchester avenue, near Milton Lower Mills, in Dorchester, is known as the Convalescent Home, and shall receive such *patients recovering from acute diseases as shall be transferred to it from the main Hospital for treatment during convalescence.*

The Superintendent of the Hospital shall, under the direction of the Trustees, have the control and management of the Convalescent Home, in the same manner as of other departments of the Hospital.

The Matron, under the direction of the Superintendent, shall have the immediate charge of the Home, and the control of all nurses and other employees and patients. She shall reside at the Home.

ADMISSION AND DISCHARGE OF PATIENTS.

Patients shall be transferred from the Hospital to the Convalescent Home by the Superintendent, subject to the direction of the Trustees, on recommendation of the Visiting Staff or otherwise; and the Superintendent shall keep a record of all patients so transferred. When patients are so transferred they shall be considered as discharged from the Hospital. Payment of their board shall be required the same as of patients at the Hospital, but separate apartments shall not be furnished at the Home. No person whose case is judged to be incurable shall be admitted to the Home.

Patients shall not be allowed to remain at the Home for a longer period than two weeks, except on recommendation of the physicians, or for special cause approved in writing by the Superintendent. All patients remaining beyond the period of four weeks shall be forthwith reported to the Visiting Committee, and to the Trustees at their subsequent regular meeting.

Patients when discharged shall be provided with a certificate stating the date of admission and discharge, and their condition when leaving the Home.

GOVERNMENT OF PATIENTS.

Patients shall implicitly observe all rules established for the government of the Home.

VISITORS.

Friends may be permitted to visit patients on week-days, between three and four o'clock in the afternoon. In all cases the Trustees, Superintendent, and Matron may exercise discretionary powers as to excluding or admitting visitors.

Visitors shall leave the Home and grounds at the expiration of the visiting hour, and shall visit no part of the Home or grounds other than the reception-room, except by permission from the proper authority.

No person shall give any article of food or drink to a patient, unless by permission of the Matron.

THE BOSTON CITY HOSPITAL.

TRAINING SCHOOL FOR NURSES.

The Trustees of The Boston City Hospital in 1878 established a Training School for Nurses, in order to give to women desirous of becoming professional nurses a systematic course of training and practice.

The Training School is controlled by the Trustees of the Hospital, like all other departments of the Hospital service. The Superintendent of the Hospital has the general supervision of all matters relating to the school, its course of work and study, lectures and discipline. The Superintendent of Nurses has the immediate charge of all the nursing in the Hospital, of all persons employed in the wards, and also the instruction and management of the nurses in the Training School. All female nurses in the Hospital must be connected with the school.

The course requires two years, and includes general medical and surgical nursing, together with ophthalmic, aural, and gynæcological nursing, and also the nursing of contagious diseases. Maternity nursing is theoretically taught, but there are no maternity wards connected with the Hospital. Those wishing to receive such a course of instruction should apply to the Superintendent of The Boston City Hospital.

The most desirable age for candidates is from twenty-three to thirty-five years. They must be of sound health, and should send with their application a certificate from a physician, certifying to the fact. They should also send a brief personal history, and give the names and addresses of three responsible persons not of their own kin who know of their good character and capabilities. Upon the recommendation of the Superintendent and the approval of the Trustees they will be received for two months on probation. The fitness of candidates for the training and work, and the propriety of retaining or dismissing them, will be determined by the authorities in charge of the school, under the direction of the Trustees.

At the end of the first month, candidates, if considered satisfactory, are permitted to wear the cap and enter upon

the regular course of training, but such candidates are not permitted to join the school formally until the end of the second month, when, if accepted, they sign an agreement to complete the prescribed course of two years, and to conform to all rules. At the end of the first six months the record and work of each pupil are carefully scrutinized as to her fitness to make a good nurse, and the right is reserved by the authorities of the Hospital to terminate then, or any time, the connection of any pupil or nurse with the school, for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

During the first two months pupils are called Probationers, for the remainder of the first year Junior Nurses, and during the second year Senior Nurses. Nurses who remain in the Hospital after graduation become Head Nurses.

The nurses in the Training School (including Probationers) reside at the three Nurses' Homes connected with the Hospital, which have rooms for ninety nurses. The houses afford home-like surroundings, and have the best of conditions necessary to good health and personal hygiene.

The Superintendent of Nurses has the immediate charge of the Training School, under the authority of the Superintendent of the Hospital and of the Trustees, and the nurses are subject to the rules of the Hospital, like any other service.

The instruction includes the general care of the sick, the making of beds changing bed and body linen, managing of helpless patients in bed, etc.; giving baths, keeping patients warm or cool, prevention and dressing of bed-sores, and proper management of the patient under various conditions, with different diseases or injuries; the making and applying of bandages and rollers, preparation of splints, application and management of surgical apparatus, applying of fomentations and poultices, the dressing of burns, ulcers, and wounds, and other minor dressings, cupping, leaching, and subsequent treatment, the administering of enemata, and use of the female catheter.

Nurses are taught how to act in the various emergencies occurring in hospital and private nursing, as well as in the accidents of ordinary life. They are also given lessons in *massage* by a professional instructor. There is a systematic course of training in cookery for the sick, the serving of food and delicacies in the proper manner, and the feeding of helpless patients, or those who resist food.

Instruction is also given in the best practical methods of supplying fresh air, of warming and ventilating sickrooms

in a proper manner, and the proper care of sickrooms for the best good and comfort of the patient; in keeping all utensils and appliances perfectly clean and disinfected; in making accurate observations of the pulse, temperature, respiration, expectorations, the secretions, state of the skin, and eruptions; of mental condition as to delirium, stupor, shock, etc.; of the conditions as to sleep, appetite, effects of diet or of stimulants and medicines; the behavior of wounds and the after treatment in surgical operations; and in the managing of convalescents. Nurses are taught the administering of medicines and the application of external remedies, how to take notes on cases, the making up of the nurse's record, and the reports to the attending doctor.

The course of training includes a fixed course of instruction during the two years from manuals and text-books, mainly given by the Superintendent of Nurses, the Assistant Superintendent of Nurses and graduate head nurses. Lectures and demonstrations, chiefly upon practical points, are given at stated times by the medical and surgical staff of the Hospital. While the instruction by the manuals, text-books, lectures, demonstrations, quizzes, and models is considerable, the main reliance is upon accurate daily drill in the wards, operating rooms, and other departments of the Hospital. Examinations, both written and oral, are held from time to time by the authorities of the school and by the Hospital staff, and nurses cannot pass to graduation unless attaining, on critical marking, at least seventy per cent.

The pupils are employed as assistant nurses in the wards, operating rooms, and out-patient departments of the Hospital. They are given six months' training in medical wards, and six months' in surgical wards; the remainder of the time to be in such wards or departments as the management may appoint.

Probationers are not paid during their first month, but for the remaining months of the junior year they receive ten dollars (\$10) per month, and for the senior year, fourteen dollars (\$14) per month, to pay for the expenses of their uniform, personal clothing, and other minor requirements. This sum is in nowise intended as wages, it being considered that their education during this time is a full equivalent for their services. When the full term of two years is completed the nurses receive, if they pass all the examinations and are otherwise satisfactory, a diploma certifying to the regular course of training and practice, and are then permitted to wear the graduates' badge of the school.

The majority of graduates engage in private nursing, but some are invited to remain in the service of the Hospital as head-nurses, and receive twenty dollars (\$20), twenty-five dollars (\$25), thirty dollars (\$30), thirty-five dollars (\$35), per month, with opportunities of promotion. Graduate head nurses who prefer to remain in hospital work, or return after a term of private nursing, are given post-graduate instructions in ward management, hospital house-keeping, and minor administration.

The school year has no fixed date, but accepted candidates may enter whenever vacancies occur. They are, as a rule, received in the order of acceptance, but those desiring to enter with less delay can generally anticipate a fixed date by placing themselves on the emergency list. When coming to the Hospital they should bring with them the following articles: Three gingham or calico dresses, made plainly; eight large white aprons, made of bleached cotton, with bibs plain at the top and gathered slightly at the bottom, two buttons on the band, with hem at bottom four inches in depth; two bags for soiled clothes; one pair of scissors, a pin ball, and a napkin-ring; a good supply of plain under-clothing—every article to be distinctly marked with indelible ink, with the owner's name. Twenty-one pieces are allowed for the laundry each week.

Nurses must bring suitable outer garments for stormy weather, and they are required to wear noiseless broad-toed and flat-heeled boots. If the teeth are out of order in any way, they must receive attention before coming for the probationary month. Nurses are required to wear the Training School uniform after they join the school. Material for dresses and caps will be sold at cost price.

Hours of duty for day nurses are from 7 A.M. to 8 P.M.; for night nurses from 8 P.M. to 7 A.M. No nurse is required to do both day and night duty on the same day except in rare emergencies. Each nurse on day duty is allowed one hour after 2 o'clock P.M., for rest and recreation, one half day after 2 P.M. each week, and four hours on Sunday. Two weeks' vacation is allowed each year. If nurses are sick they are cared for in the Hospital, but wages are stopped. Nurses on night duty are required to be in bed until 4 P.M. Nurses may be called upon for four months' regular night duty during the two years' training; besides "special cases" to a limited number.

COURSE OF INSTRUCTION.

* JUNIOR YEAR.

Manual of Hospital Nurses (1)	<i>Domville.</i>
Manual of Nursing: Medical and Surgical (2)	<i>Humphrey.</i>
Lectures on Fever Nursing (3)	<i>Wilson.</i>
The Care of the Sick	<i>Billroth.</i>
Handbook of Obstetrical Nursing	<i>Fullerton.</i>
Glossaries, tables, technicals, etc.	<i>Various.</i>
A lecture once a week (for thirty-four weeks) by a member of the Medical and Surgical Staff.		

Critical Reviews on the lectures given by the Medical and Surgical Staff.
Instructions in the Wards by Head-Nurses and Senior Nurses.

SENIOR YEAR.

Handbook for Hospitals (1)	<i>Woolsey.</i>
Physiology, Anatomy, and Hygiene, [complete] (4)	<i>Hutchinson.</i>
General Anatomy, including instruction from charts, models, and the skeleton.		
Elementary Materia Medica	<i>Various.</i>
A lecture once a week [for thirty-four weeks] by a member of the Medical and Surgical Staff.		
Practical instruction in <i>Massage</i> . [Six lessons.]		
Practical instruction in Cooking for the Sick. [Ten lessons.]		
Instruction in the Wards by Assistant Superintendent of Nurses, Night Superintendent of Nurses, and Head-Nurses.		
Instruction and drill in the etherizing, operating, and recovery rooms by the Operating-room Nurse.

DISTRIBUTION OF STUDIES.

Monday,	2 to 5 P.M.	Senior Nurses, Cooking class.
	2 to 3 P.M.	Senior Nurses [section], <i>Massage</i> .
	3 to 4 P.M.	Junior Nurses [section], <i>Massage</i> .
	8 P.M.	Head-Nurses; hospital administration, ward management, minor executive work, training of Assistant Nurses.
Tuesday,	11 A.M.	Senior Nurses [section], Operating-room.
	2 P.M.	Junior Nurses [2d class, 3d Div.], Recitation.
	3.30 P.M.	Senior Nurses [1st class, 3d Div.], Recitation.
Wednesday,	3.30 P.M.	Senior Nurses [1st class, 2d Div.], Recitation.
Thursday,	2 P.M.	Senior Nurses [section], <i>Massage</i> .
	3 P.M.	Junior Nurses [section], <i>Massage</i> .
	3.30 P.M.	Junior Nurses [2d class, 2d Div.], Recitation.
Friday,	11 A.M.	Senior Nurses [section], in Operating-room.
	2 P.M.	Senior Nurses [1st class, 1st Div.], Recitation.
	3 P.M.	Junior Nurses [2d class, 1st Div.], Recitation.
	4 P.M.	Lecture to School in Operating Amphitheatre by a member of the Medical and Surgical Staff.

LIST OF LECTURES AND SUBJECTS.

A lecture is given to the Training School on Fridays at 4 P.M., in the Operating Amphitheatre, by a member of the Medical and Surgical Staff, once a week between September 15 and June 15. The following are among the lectures given:

Five.—Surgical Dressings: poultices, washes, fomentations, bandaging, splints, leeches and blisters, enemas, surgical hæmorrhage, etc.

Three.—Theory of Wounds: modes of healing, granulations, ulcers, cellulitis, suppuration, sloughs, erysipelas, pyæmia, gangrene, sepsis, etc.

Three.—Bacteriology, brief history and general theory: micro-organisms; general distribution in air, water, etc. Elementary consideration of pathogenic and non-pathogenic micro-organisms. Exhibition of apparatus and cultures. Practical points for nurses.

Two.—Theory of Sepsis: aseptic treatment, different methods; dressings, with demonstrations and "quiz drill."

Two.—Emergencies: hæmorrhage, burns, heat-stroke, fits or seizures, drowning, fractures, immediate treatment of wounds and injuries, foreign bodies in eye, nose and ear, poisons, domestic emergencies, and practice of expedients.

Two.—Surgical anatomy and landmarks, hæmorrhages, etc.

One.—Surgical Operations: care of patients before, during, and after operations; anæsthesia and recovery; accidents, hæmorrhage, shock, especially as in private nursing.

One.—Abdominal Surgery: including ovariectomy, herniotomy, operations for abdominal injuries, etc.

One.—Fractures: varieties, preparation and care of splints and apparatus for treatment, management of cases, etc.

Three.—Medicines: avenues of taking: preparation and doses; classes of internal and external poisons; cautions; hospital formulæ.

One.—Nursing in Fevers: theory of fever, symptoms and course of, different plans of treatment, nurses' duties as to symptoms, bed, clothing, secretions, baths, food, and management of cases.

Four.—Infectious fevers, especially diphtheria and scarlet fever; symptoms and course of disease; complications; infection and contagion; special nursing in croup, laryngitis, tracheotomy, intubation, etc.; management of patient, and surroundings; personal hygiene of nurse in attendance, etc.

Two.—Symptomatology in Disease; what and how to observe accurately; vital organs and special symptoms. The model sick-room; temperature, light, ventilation, care of bed, bedding and clothing, furniture, utensils, disinfection, cleansing, dusting, etc.

One.—Contagious Fevers and Epidemics; prevention of contagion, disinfection, care of habitation, etc.

Three.—Care of Children in Health and Disease; diet and clothing of infants and children; various infantile diseases.

Two.—Physiology of Pregnancy and Labor; delivery, confinement nursing.

One.—On Gynæcological Nursing; preparation of patient for examination or operation; operations after treatment, douches, use of catheter, etc. (Demonstrations to sections of senior nurses in Ward S operating-room.)

One.—Special Nursing in Nervous Diseases, including the Insane.

Two.—Special Nursing in Skin Diseases and Syphilis in the Infant and Adult.

One.—Special Nursing in Diseases of the Eye. Anatomy and Physiology of the Eye, and General Care in Health and Disease.

One.—Special Nursing in diseases of the Ear; its care in health and disease; nurses' duties at operations and continued treatment in disease.

One.—Nursing in diseases of the throat.

One.—Infant Surgery: Preparation for, and after care.

Two.—Food Values and Principles of Cooking Food.

One.—Urine: characteristics, properties, including taking notes on same, and brief analysis. Drill in laboratory by classes in sections.

One.—*Massage*, its history, theory, and modes of application.

Three.—Visceral Anatomy: demonstrations by post mortems; care of the dead, etc.

LIST OF GRADUATES.

THE BOSTON CITY HOSPITAL TRAINING SCHOOL FOR NURSES.

[* Married. † Died.]

[The Badge of Graduate Nurses.]

1879.

Miss Rosa McCormick,	Miss Elizabeth A. Andrews,
“ N. Elizabeth Fillebrown,	* “ Myra E. McIlvin,
† “ Mary L. Kelso,	* “ Martha J. Blackwood. (6)

1880.

EXTRAS.— In addition to the above, the following extras may be ordered by the Visiting Physicians and Surgeons: Milk, Beef Tea, Chicken Broth, Mutton Broth, Gruel, Oatmeal Mush, Corn Starch, Boiled Rice, Eggs, Beefsteak, Mutton chop, and Chicken.

A small allowance of Milk and Beef Tea will be provided for each ward daily. The House Physician or Surgeon may order these articles by a signed special order in each case when needed for patients who enter in the intervals between the regular visits of the Visiting Physician or Surgeon to whom the case is assigned.

All Wines and Liquors, Ale, Beer, etc., will be ordered by the Visiting Physicians and Surgeons only, excepting in emergencies, when special orders for the same may be given by the House Physician or Surgeon, to be afterwards approved by the Visiting Physician or Surgeon, as the case may be, or by the Resident Physician.

JULY 2, 1878.

By Order of the Trustees.
